

Adaptive Equipment Resource Guide

Introduction

This guide is to be used by judges, classifiers, and others to assist with understanding the reasons behind the rules related to use of Adaptive Equipment and with interpreting them when considering the use of new or unique pieces of equipment.

Pictures are used to help clarify how adaptive equipment / devices are to be measured. Some pictures will also identify legal and/or illegal equipment. They are simply provided to assist coaches, archers, and judges in understanding how the rules are to be interpreted and demonstrate possible examples in some categories of assistive equipment. **The examples in this document are not exhaustive of types of equipment that is allowed or not allowed.** It is important to understand the philosophy behind the rules when considering archers equipment.

It is also important to remember that any **shooting equipment** not covered in the Adaptive Equipment Resource Guide does not require authorisation by classifiers and must comply with World Archery rules as specified in the Rulebook.

Version

This document is produced by the head of classification together with World Archery classifiers *ad hoc* committee and checked by the office liaison. It is acting as an explanatory document and detail certain aspects about adaptive equipment.

This document is subject to updates whenever necessary.

Version number	Date	Owner
1.0	21 March 2022	Cecilia Viscarra
1.1	15 April 2023	Siret Luik

Content

1. Wheelchair
2. Strapping
3. Stool
4. Release Aid System
5. Bow Bandage
6. Bow Arm Aid
7. Bow Arm Splints
8. String Arm Wrist Splint
9. Shoe Block or Wedge
10. Shooting Assistant
11. Athlete's Agent
12. Visually Impaired Equipment

1. Wheelchair

A wheelchair of any type (provided it does not have more than four wheels touching the ground) may be used and subscribes to the accepted principle and meaning of the word “wheelchair”. Use of a wheelchair will be on the classification card.

- a. Power wheelchairs are allowed but must be powered off when on the shooting line.
 - i. They must conform to the length and number of wheels allowed on the ground.
 - ii. The seat should be in a neutral upright position.
- b. Scooters are not allowed.

- c. A fifth wheel is allowed on the field of play but not on the shooting line. It can remain attached as long it is raised and not touching the ground.

- d. No part of the wheelchair may support the bow arm while shooting.
- e. For all wheelchair athletes, any lateral support defined as anything that prevents the athlete falling sideways in the chair by providing support to the side of an athlete's trunk above the pelvis is allowed.
 - i. Below is a picture of side support that does not give trunk support to an athlete because it is below the pelvis (waist height). Because it is not giving support, it can be greater than half the body width of the athlete.

Support below the pelvis

- f. A lateral support may not protrude further forward than half the width of the athlete's rib cage measured as the half point between the base of the sternum (breastbone) and the spinous process at T7 (mid back)

Measuring half the body width

Uprights as lateral support

Molded seat back

Arm rest not acting as lateral support

Arm rest acting as lateral support - illegal length

- g. All parts of the chair back and lateral support shall be at least 110mm below the athlete's armpit while shooting at any distance. In the case of uneven/rotated shoulder height, (e.g., scoliosis) the distance is measured from the lower armpit.
- i. The intent behind this rule is that the back of the chair does not support the shoulder blade which is part of the shoulder joint.
 - ii. If an athlete has a fixed scoliosis and one side of the chair does not meet the 110mm minimum, it will be noted on the classification card in the comment's section.

Measuring from the highest part of the chair

Distance being measured

Illegal back height

- h. For W1 sport class athletes, if there is a medical reason for the back of chair height to be less than 110mm below the armpit, the reduced height may be approved by classifiers

and noted on the athlete's classification card in the comment section. The sides of the backrest must meet the 110mm requirements.

- i. Push handles attached to the uprights of the wheelchair back are considered part of the chair and must conform to the measurement of 110mm or be removed.
 - i. The handles are measured because the athlete can lean back against them and support their trunk or shoulder blade.
- j. Push handles that are not directly attached to the uprights of the wheelchair back are not considered part of the chair back for the purpose of this rule.
 - i. The highest part of the chair will be measured from the back of the chair in the example below because the athlete is not able to lean against the push handles.

The athlete cannot lean against these (marked with red arrow)

- k. The wheelchair shall not exceed 1.25m in length.
 - i. This includes the feet of the athlete.
- l. If the ground is uneven, a block to level the chair is allowed.
- m. The use of anti-roll devices is allowed. A maximum of two wedges behind or in front of the rear wheels to prevent rolling are permitted on sloped or uneven surfaces. On flat, artificial surfaces anti-roll devices attached to the wheels or wedges/chocks behind or in front of the wheels are not allowed.
 - i. These are examples of different types of wedges/chocks. The purpose of these devices are prevent the chair from rolling forwards or backwards.

- ii. They can be mechanical and attached to the wheelchair.

- n. Neither the feet of the athlete nor the footplates of the wheelchair may be in contact with the ground when shooting.
 - i. This adds stability to the athlete.
- o. Anti-tipping devices are allowed provided they do not touch the ground.
 - i. These keep the chair from tipping backward.

2. Strapping

Strapping in any class is only to be used for medical or safety reasons and not to enhance performance. All athletes who were previously authorised to use either strapping or body support can now use strapping in addition to the lateral support on their wheelchair. Athletes classified after 2021 are allowed to have strapping only if it is on their classification card.

- a. W1 athletes, when their classification card allows, may use any amount of strapping in any combination to maintain body stability if no support is given to the bow arm while shooting.

- b. W1 athletes may use any *non-rigid* corset-type body support and/or chest straps in any combination as medically necessary and as approved by the Classifiers.
- c. W2 athletes, when their classification card allows, may have only a single strap of not more than 5 centimeters wide at any point and wound only horizontally and only once around the torso and must sit at or below the 110mm height restriction.

- a. For some wheelchair athletes, leg strapping may be authorised as specified on their international classification card. Leg strapping straps is limited to 5 cm wide. Leg strapping is available to use for safety reasons and may be placed around the ankles, knees and/or mid-thigh.
- b. Where, for medical reasons and with a prescription from a medical specialist, a rigid or non-rigid corset type support is required for a short period of time, it may be temporarily approved by Classifiers for a specified time. The W2 athlete may not use the corset in conjunction with strapping.
 - i. **The time limit must be designated with a fixed review date on the classification form and be determined by a classification panel. The reason for the temporary use should be clearly described in the comments on the back of the classification card.**

3. Stool

A stool may be used by some athlete in the standing class athletes when allowed by a Classifier. It will be listed on the classification card.

Legal

Legal

Legal

- b. A stool must not have a backrest of any kind.

Not legal

Not legal

- c. The stool and athlete must fit within the shooting line space at an event.
- d. The classification panel may approve stool use for an athlete who scores fewer than the 38 qualifying points on the grounds of safety due to poor standing balance.
- i. The rationale for approving the stool must be stated on the backside of the card under the comments section.
- e. The classification panel may approve a unique stool for an athlete based on their specific functional limitations.
- i. The rationale for approving the unique stool must be stated on the backside of the card under the comments section and should be accompanied by a picture of the unique device on the classification card.

4. Release Aid System

Classifiers may authorise the use of a simple system that assists the athlete to use a legal release aid based on the functional deficit of the athlete (e.g. simple harness system). The release aid system cannot function as a form of lateral support or as a rigid corset.

- a. The release aid itself is governed by World Archery Rules, [Book 3, chapter 11](#) and must be approved for use by the judges at the event.
 - i. Lateral or side support to the trunk gives an advantage to an athlete by stabilising their trunk during shooting.
 - ii. A release aid system must not sit below the bottom the rib cage.
 - iii. Any release aid system that is above the bottom of the rib cage is legal. Any release aid system that goes to the pelvis shall be considered lateral support and is illegal. The rigid material of a release aid system may not wrap around the trunk of the athlete for more than 1/2 of their body. Lacing or a strap may be used to secure the system around the rest of the trunk.

The picture on the left shows the maximum amount allowed to be covered by the system and the picture on the right shows illegal coverage.

Legal

Not legal

- iv. Any exceptions will be clearly marked on the comment section on the front of the classification card and the rationale will be explained by the Classifier on the back of the card. A picture of the unique system should be placed on the front of the classification card.

No trunk support

Trunk support given – it is below the ribs

- b. Recurve Open athletes may not use a release aid system.
- c. Para athletes may use a mouth tab provided it is permanently attached to the string.

5. Bow Bandage

Para athletes with a bow arm disability may use a bow bandage to secure the bow grip to their hand as deemed eligible by the Classifier. A bow bandage represents any form of *non-rigid* strapping which assists with bow gripping while still allowing for bow movement. It may not add stability to the wrist.

6. Bow Arm Aid

An athlete who is unable hold a bow due to amputation may use an artificial aid or prosthesis to do so. This aid may be attached to the bow, if it is not totally rigid or permanently fixed while still allowing for bow movement upon arrow release. Under no circumstances may it be electric or electronically controlled.

7. Bow Arm Splints

Para athletes with a bow arm disability may use an elbow splint and/or wrist splint, as deemed eligible by the Classifier based on the functional impairment of the athlete. This must be clearly described on the classification card.

8. String Arm Wrist Splint

Para athletes with a string arm disability may use a wrist splint or wrist splint-release aid combination as deemed eligible by the Classifier based on the functional impairment of the athlete.

9. Shoe Block or Wedge

Blocks or wedges under the shoe do not require authorisation to use and do not have to be on the Classification Card. See rule 11.1.10.1.

Devices to raise the foot or part thereof, attached, or independent of the shoe are permitted, if they do not present an obstruction to other athletes at the shooting line, are in contact with the ground, and such that they do not protrude more than 2 cm beyond shoe dimensions.

10. Shooting Assistant

With classification panel approval, W1 or ST class para-athletes with severe upper limb disability who are unable to nock their arrows safely or efficiently or adjust their sight may be allowed a shooting assistant for this purpose.

- a) The assistant may adjust the bow sight at any time during the shooting sequence. The archer can give directions to the assistant only for loading arrows or adjusting sight or other pieces of the archer's equipment. The assistant must remain silent during the end of shooting and not provide coaching to the archer in any way. In particular, he is forbidden to spot, or to use a scope or binoculars.
- b) The assistant must not be a disturbance to other athletes and must wear the same uniform and number as the para-athlete.

- c) If the para-athlete obtains approval to use an assistant, then the assistant should assist during both the qualification round and during match play.

Note for classifiers

It is classifiers responsibility to ensure adaptive equipment is authorised fairly and based solely on the athletes' impairments. Adaptive equipment is authorised to match the level of impairment and not to be authorised to enhance performance. Sometimes it is difficult to balance the athletes request for an adaptive equipment and their need for one based on their impairment. Every effort must be made to complete a thorough bench assessment followed by a field assessment when required, before authoriaing an adaptive equipment.

One of the more challenging adaptive equipment to authorise is the use of an Assistant. An assistant is only to be authorised for W1 or ST class para-archers with severe upper limb disability who are unable to nock their arrows safely, or efficiently or adjust their sight may be allowed an assistant for this purpose. Just because the archer feels they want an assistant during elimination or finals does not mean they need one. We need to be clear that the archer must have reasons that they need an assistant all the time. For example, an upper limb that does not function well enough to physically load the arrow, or has significant tone that may be managed during regular competition but gets worse during the stress of finals may be relevant. But if they can efficiently and effectively load their arrows on the normal field of play and in various weather conditions, then they do not need an assistant during finals. That may give them a significant advantage over their competitors as they will have both an assistant and a coach available in head-to-head competition.

Classifiers should be very cautious authorising assistants as adaptive equipment to be confident in maintaining a fair playing field for all.

11. Athlete's Agent

All athletes are entitled to use an agent to score and pull their arrows. An assistant may act as an athlete's agent.

12. Visually Impaired Equipment

There is no additional adaptive equipment authorised for visually impaired athletes.

Equipment allowed for visually impaired athletes includes blindfold, tactile sights and a spotter or a coach as outlined in World Archery Target Rule Book, [Book 3, chapter 21.12](#) "Para Archery".
